

Download

The screenshot shows a file sharing interface. On the left, there is a blue folder icon with a cloud inside. Below it, a rating of 6.4 is shown with five stars and the text '2865 VIEWS'. To the right of the folder icon, the text reads 'File was found and ready to download!' followed by 'UPDATED 14 HOURS AGO'. Below this, it says 'Fastest Source: useenet.nl'. A blue button labeled 'Download' with a download icon is present. To the right of the button, it says 'SECURE SCANNED'. Below the main content, a message states 'You need to [log in](#) before you can post comments.' At the bottom, there are three icons with labels: 'Navigation' (a hamburger menu icon), 'Registration' (an icon of two people), and 'FAQ' (a circular refresh icon).

Q: How can I get the windows version from a C# WPF Application Is there a way to get the windows version from a C# WPF Application? I want to know the versions of the windows.

A: To get the "windows version" from a WPF application, you have to read up on: How to get the WPF build This article will show you how to get the build of your current Windows Version: MSDN - How to: Determine the Windows Version (C# Programming Guide) Ask HN: Software engineering vs. hardware? - d5efre I'm looking for a new degree (or a new career) and I would love to do something in the area of "software engineering". The problem is that I'm fairly sure that I would rather work in an area that is more aligned with my passion. I would love to work on

hardware projects and eventually (perhaps) even design and build my own product. However, I'm also quite concerned that my undergraduate studies were solely focused on programming (C, C++, Pascal, Java, PHP, Matlab, etc) which doesn't seem to have given me a solid grasp of hardware fundamentals. Now the question is: is it a good idea to switch to a program that's more oriented towards hardware? ===== lutorm Probably not a good idea if you want to work in the hardware industry (unless you're planning to be a fabless chip company). The biggest pain point is that there's a huge oversupply of programmers. It's very hard to get hired as a programmer for a fabless chip company unless you can show a track record of lots of successful hardware products, which is pretty hard to do for a fresh programmer coming out of an undergrad CS program. A problem for you as well as other software people who want to go into the hardware industry is that you're not likely to get the same kind of training in a good tooling and development environment as you would if you just

went to an EE or CS program. I'm not a big fan of
